

THE ONLY WORKERS COMPENSATION FORMULA YOU NEED TO KNOW!

# Control Your Experience Modifier & YOU Control Your Bottom Line!

Your experience modifier can impact your ability to compete, and reflects several things. The frequency of your claims, the size of claims paid as a result of injuries, and a host of other calculations. All of this has a direct effect on what a business pays for their workers' compensation premium.

**What can a business do?** Loss control, monitoring each claim individually, and subsequent modifier changes are the keys to success. Monitoring claim reserves on each claim to ensure that they correlate to claim file documentation. Monitoring subsequent experience modifiers for accuracy as data transferred between the insurance carriers, NCCI and/or state rating bureaus, proper worker classifications, to name a few. No matter what you pay for workers' compensation, the experience modifier needs to be monitored.

- ▶ America's premier workers' compensation cost control system with a support group.
- ▶ Proven and documented track record of lowering reserves by 30% and modifiers by 27 points over time.
- ▶ Independent company with no fiduciary issues with carriers or the insurance industry.
- ▶ Endorsed and beta tested by State Department of Insurance.
- ▶ Registered Mark by U.S. Patent & Trademark Office

AcuComp® is a claim reserve and experience modifier verification system that tracks reserve reductions and subsequent modification verifications through the experience rating process. They are able to do this by utilizing their proprietary software system and their team of experts that detect, correct, and obtain premium refunds.
